

PRAHARI — System Architecture

Predictive Road Analytics & Hotspot Intelligence for Enforcement · Flipkart Gridlock Hackathon 2.0 · Theme 3

How PRAHARI Works

— follow one traffic image as it becomes a city-level decision

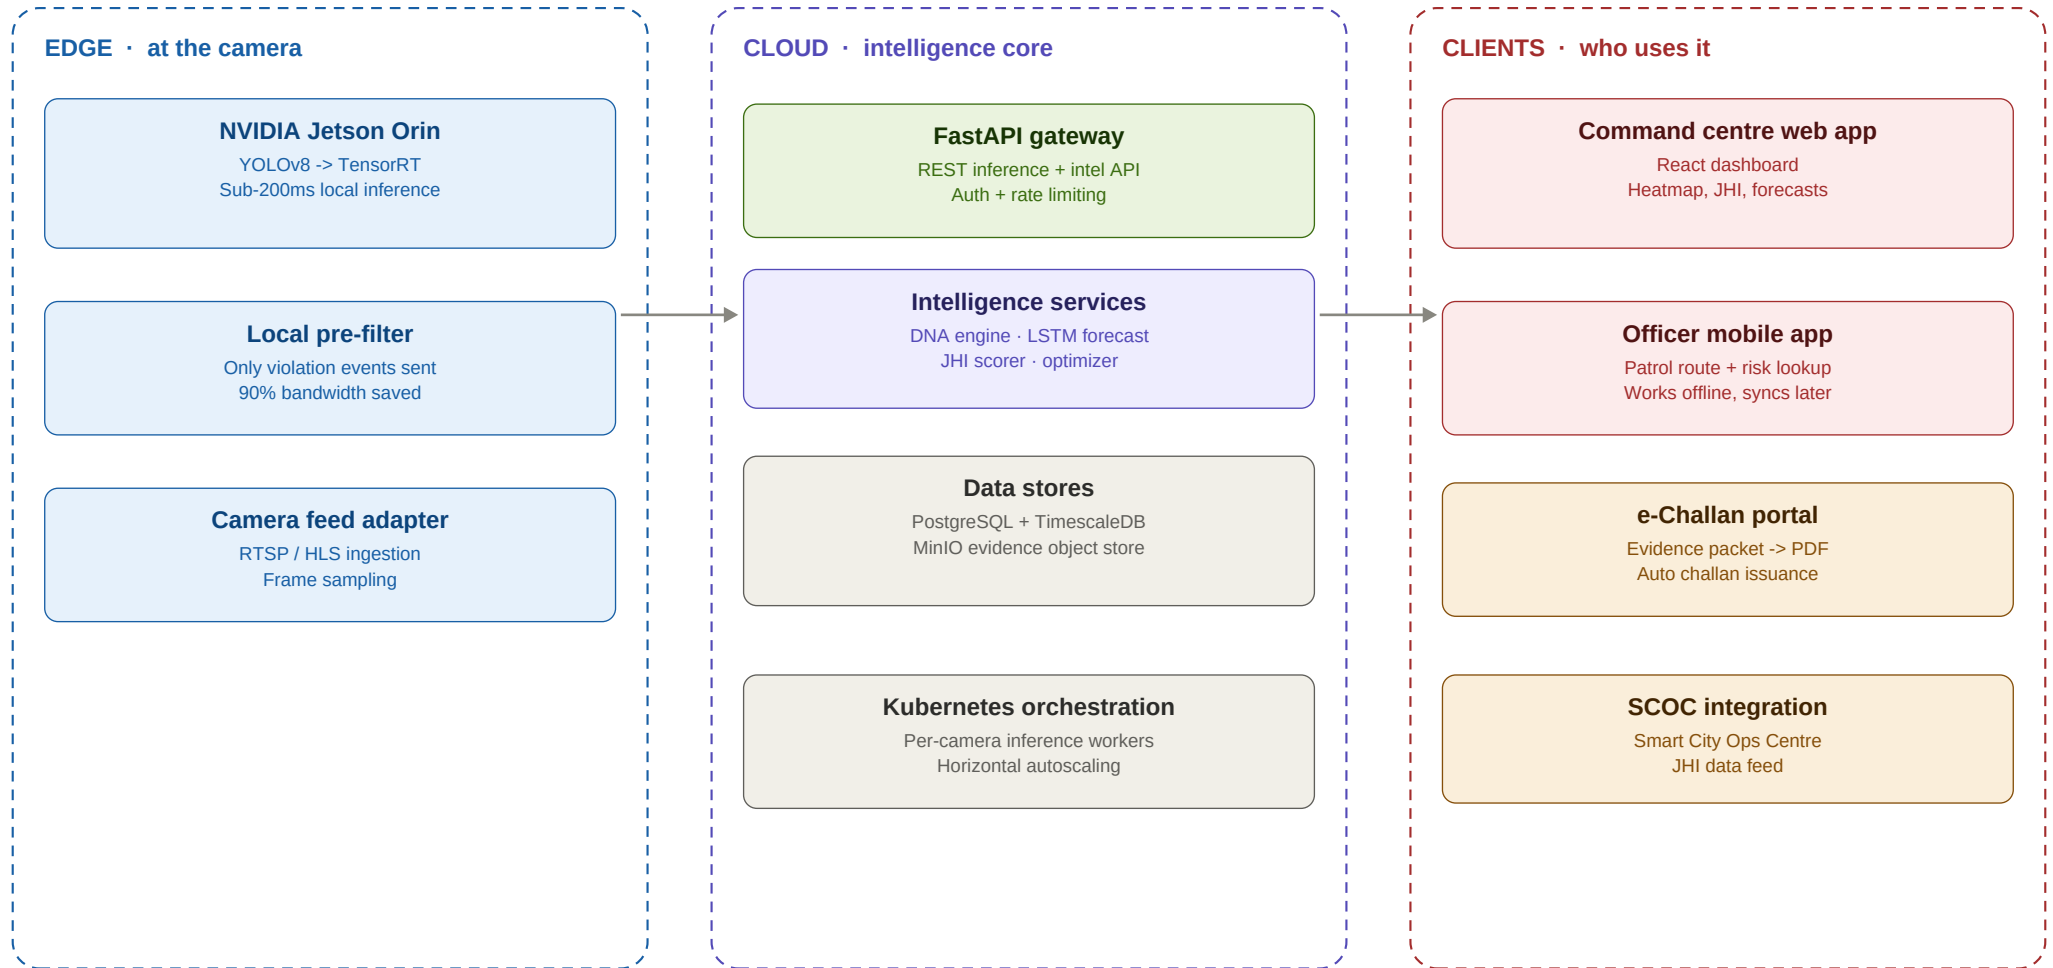

Detection without decision is noise.

Steps 1-3 are what every team builds. Steps 4-7 are what wins. PRAHARI turns a single image into who, where, when, and what to do.

Web & Deployment Architecture

How PRAHARI runs in production — edge devices, cloud services, and client apps

Edge does heavy CV inference locally; cloud runs the intelligence layer and stores history; clients consume real-time decisions.

Adding 100 new cameras requires zero model retraining — each camera spins up its own containerised inference worker.
